Manufacturing According to Approved Drawings

YuRong specializes in custom stainless steel manifolds manufactured according to customer-approved drawings.

Before production, our engineering and quality teams verify:

• Dimensions	• Branch locations
• Thread specifications	• Flange standards
• Material requirements	• Manufacturing feasibility

This drawing-based manufacturing approach helps ensure that:

- Every manifold is produced exactly according to customer requirements
- Dimensional accuracy is maintained throughout production
- Consistency is guaranteed across all product batches

Conclusion

This manufacturing method combines design precision, structured quality checks, and customer alignment into a single solution. For modern fluid systems where dimensional adherence and rigorous engineering standards are critical, it provides a significant advantage over unverified or standardized fabrication approaches.
